

ROOM FOR YOUR TOES

A roomy toe box allows space for natural toe splay so your feet can function the way they were designed to.

Allowing space for the big toe to remain straight, optimizes natural stability.

Room for natural toe splay helps avoid squished toes, improving comfort and balance.

When the toes and forefoot can splay, it creates stability for our feet so we can push forward during walking and running.

ZERO-TO-LOW DROP

Built to promote natural body alignment and evenly distribute weight across your feet.

Balances weight distribution across the foot to alleviate excessive pressure on the forefoot.

Encourages a more efficient, functional movement pattern.

Low drop may be more comfortable (than zero drop) to those with less range of motion in the foot, ankle, or calf.
